

## Identity and Directory Solutions

Moran Technology Consulting is an experienced and proven provider of consulting services to the higher education industry. We are intimately familiar with both the needs and the challenges that education organizations face in trying to provision, manage and secure their digital identities. We offer a full range of consulting services to assist our clients in planning, designing and implementing highly secure and reliable identity management and enterprise directory solutions.

Managing campus identity data is extremely challenging. The demographic and institutional data associated applicants, students, staff, faculty, alumni, etc. is often located on multiple systems serving diverse purposes and change frequently. Identity and directory solutions make it possible to synchronize and manage user identity attributes and authentication information across diverse systems.

Effective identity solutions aren't only about technology. Identity management is an integrated system of business processes, policies and technologies that enable organizations to facilitate and control their users' access to critical online applications and resources.
